Position Overview

Are you interested in shaping the future of interactive entertainment? Are you excited about enabling the next generation of games across all dedicated and mobile gaming devices and platforms, enabling consumers to play any game, with anyone, anywhere, at any time?

This is an especially great time for the videogame industry which has a vibrant community of connected players around the globe playing on more devices than ever before. EA is transforming toward a digital future both in the games and services we create as well as how we connect and engage with our players.

EA's Digital Platform team is looking for a talented, passionate and hands on development managers to be responsible for the stability and scalability of EA's Identity and Commerce systems. Identity system provide secure and easy-to-use online system for games to build and maintain a strong player relationship. Commerce system is the backbone service that provides e2e commerce service on PC and web, including but not limited to catalog, checking out, payments and fraud detection.

Key Responsibilities

- Be responsible for the scalability and reliability of all data storage in Identity and Commerce, including capacity planning and monitoring.
- Architecting and leading team to adopt new technologies to provide reliable online service with increased traffic and best response time on multiple components systems.
- Working with operation engineers and other components owner to trouble shooting and apply quick fix for live site issues.
- Participate in designing and develop key features to increase capacity and reach 100% reliability.
- Develop, mentor and oversee a group of developers who are passionate about backend technologies
- Conduct design review and code review for features that has massive concurrent usages
- Owning the load testing environments and drive load testing with internal team and external partners

Job Qualifications

- Degree in computing science or equivalent education/experience (graduate degree preferred)
- 7+ years software engineering experience
- 5+ years of experience on backend work
- Expertise on database technologies, such as MySQL, NoSQL. Experience for database scaling out is a must
- 2+ yrs leading and manage a team

What's in it for you? Glad you asked!

We love to brag about our great perks like comprehensive health and benefit packages, tuition reimbursement, 401k with company match and, of course, free video games. And since we realize it takes world-class people to make world-class games, we offer competitive compensation packages and a culture that thrives off of creativity and individuality. At EA, we live the “work hard/play hard” credo every day.
